

# Revitalizing Solar Insights: A Dashboard for West Tennessee Solar Farm

Joshua Chamberlain & Andy Lum

Mentor: Dr. Justin R. Sims

UT Martin

October 12, 2023

# Table of Contents

- ① Introduction
  - Motivation
- ② R-Shiny & Functionalities
  - What is R-Shiny?
  - Functionalities
- ③ List of Technologies
  - Technologies used to supply the dashboard
- ④ Project Goals
  - What do we want to accomplish overall?
- ⑤ Dashboard Demo
- ⑥ Conclusion
- ⑦ Future Work
- ⑧ Contact Information

# Introduction

## Motivation

Can we build an interactive dashboard to improve research and education accessibility, optimize power production, and advance sustainable energy practices?

# R-Shiny & Functionalities

- 1 Provides an easier and more integrated way to creating web-based dashboards without needing to learn web development languages like HTML.

# R-Shiny & Functionalities

- ① Provides an easier and more integrated way to creating web-based dashboards without needing to learn web development languages like HTML.
- ② Provides the following functionalities:

# R-Shiny & Functionalities

- ① Provides an easier and more integrated way to creating web-based dashboards without needing to learn web development languages like HTML.
- ② Provides the following functionalities:
  - Real-Time Data Visualization

# R-Shiny & Functionalities

- ① Provides an easier and more integrated way to creating web-based dashboards without needing to learn web development languages like HTML.
- ② Provides the following functionalities:
  - Real-Time Data Visualization
  - Interactive Maps

# R-Shiny & Functionalities

- ① Provides an easier and more integrated way to creating web-based dashboards without needing to learn web development languages like HTML.
- ② Provides the following functionalities:
  - Real-Time Data Visualization
  - Interactive Maps
  - Sensor Information Panel

# R-Shiny & Functionalities

- ① Provides an easier and more integrated way to creating web-based dashboards without needing to learn web development languages like HTML.
- ② Provides the following functionalities:
  - Real-Time Data Visualization
  - Interactive Maps
  - Sensor Information Panel
  - Historical Data Analysis

# R-Shiny & Functionalities

- ① Provides an easier and more integrated way to creating web-based dashboards without needing to learn web development languages like HTML.
- ② Provides the following functionalities:
  - Real-Time Data Visualization
  - Interactive Maps
  - Sensor Information Panel
  - Historical Data Analysis
  - User-Friendly Interface

- ② Provides the following functionalities:
  - Real-Time Data Visualization
  - Interactive Maps
  - Sensor Information Panel
  - Historical Data Analysis
  - User-Friendly Interface
  - Responsive Design
  - Dashboard Hosting
  - Export Data

# List of Technologies

## 1 MySQL

stores and manages sensor data in a table containing minute by minute data separated by data for each sensor.

# List of Technologies

## ① MySQL

stores and manages sensor data in a table containing minute by minute data separated by data for each sensor.

## ② Python

Retrieves data from the MySQL database and updates a Google Drive CSV for data simulation.

# List of Technologies

## ① MySQL

stores and manages sensor data in a table containing minute by minute data separated by data for each sensor.

## ② Python

Retrieves data from the MySQL database and updates a Google Drive CSV for data simulation.

## ③ R-Shiny

Develops an interactive dashboard for data visualization.

# List of Technologies

## ① MySQL

stores and manages sensor data in a table containing minute by minute data separated by data for each sensor.

## ② Python

Retrieves data from the MySQL database and updates a Google Drive CSV for data simulation.

## ③ R-Shiny

Develops an interactive dashboard for data visualization.

## ④ Shinyapps.io

Hosts a web server to allow users from all major operating systems to be able to access the dashboard.

# List of Technologies

## ① MySQL

stores and manages sensor data in a table containing minute by minute data separated by data for each sensor.

## ② Python

Retrieves data from the MySQL database and updates a Google Drive CSV for data simulation.

## ③ R-Shiny

Develops an interactive dashboard for data visualization.

## ④ Shinyapps.io

Hosts a web server to allow users from all major operating systems to be able to access the dashboard.

## ⑤ Google Cloud Console

Safeguards API information for enhanced data security.

# Project Goals

## ① Streamlined Data Pipeline

# Project Goals

- 1 Streamlined Data Pipeline
- 2 Continuous Data Maintenance

# Project Goals

- ① **Streamlined Data Pipeline**
- ② **Continuous Data Maintenance**
- ③ **R-Shiny Dashboard**

encompasses all of the aforementioned functionalities.

# Project Goals

## ① Streamlined Data Pipeline

## ② Continuous Data Maintenance

## ③ R-Shiny Dashboard

encompasses all of the aforementioned functionalities.

## ④ Cross-Platform Accessibility

Ensure inclusivity by designing a webpage that accommodates diverse laptop operating systems, guaranteeing a seamless user experience.

# Dashboard Demo

## West Tennessee Solar Farm

### Tomorrow's Forecast

Date	Metric	Value
2023-09-24	Predicted Average Cloud Cover (%)	82.62
2023-09-24	Predicted Average Temperature °F	72.96
2023-09-24	Weather Outlook	Overcast
2023-09-24	Predicted UV Radiation	7.21

# Future Work

## ① Predictive Analysis

# Future Work

- 1 **Predictive Analysis**
- 2 **Notifications**

# Future Work

- ① **Predictive Analysis**
- ② **Notifications**
- ③ **Video Tutorial**

# Conclusion

The dashboard creates:

- ① An educational tool for people to learn about the Solar Farm Process
- ② A research tool that provides public data to study
